

Vapor Phase Infiltration (VPI) of Polymers with Intrinsic Microporosity
Emily K. McGuinness, Fengyi Zhang, Ryan P. Lively, Mark D. Losego

Supplemental Data

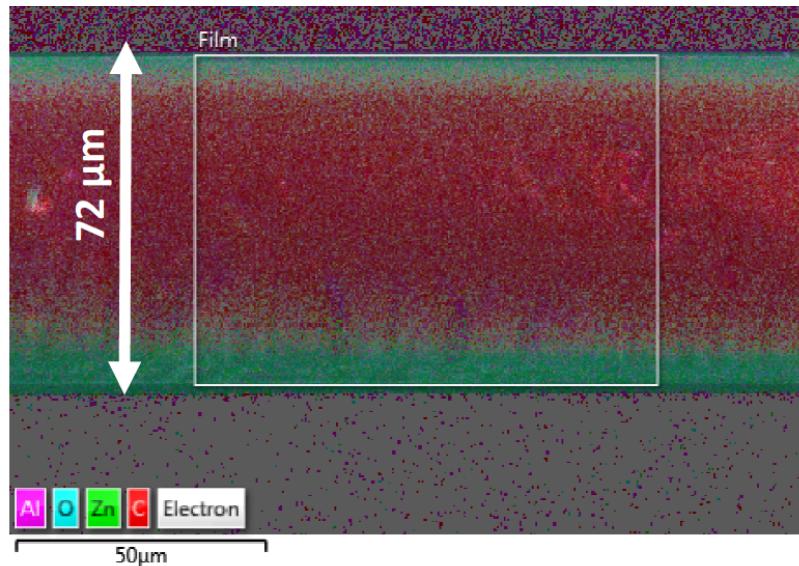

Figure 1. EDX map of a zinc oxide infiltrated PIM-1 film showing diffusion of precursors into the film. Infiltration depths of 10 microns are observed.

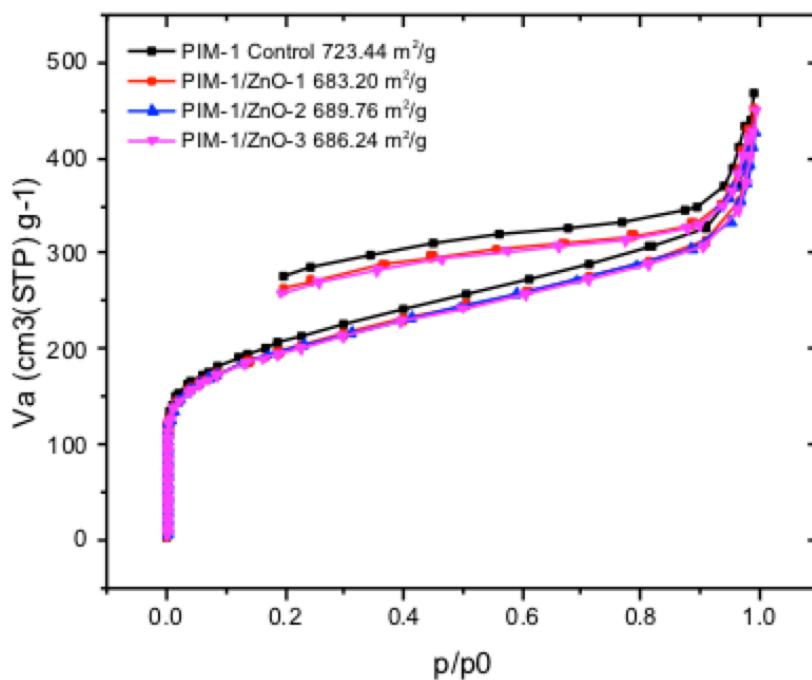

Figure 2. BET analysis of zinc oxide infiltrated PIM-1 powders with diethyl zinc and water hold times of 1) 10 minutes 2) 30 minutes and 3) one hour at 90°C. PIM-1 surface area remains high despite infiltration.
