

Figure 1 – Thermoelectric power factor and optical transmittance for $\text{TiO}_2:\text{Nb}$ thin films as a function of reactive oxygen flow during magnetron sputtering.

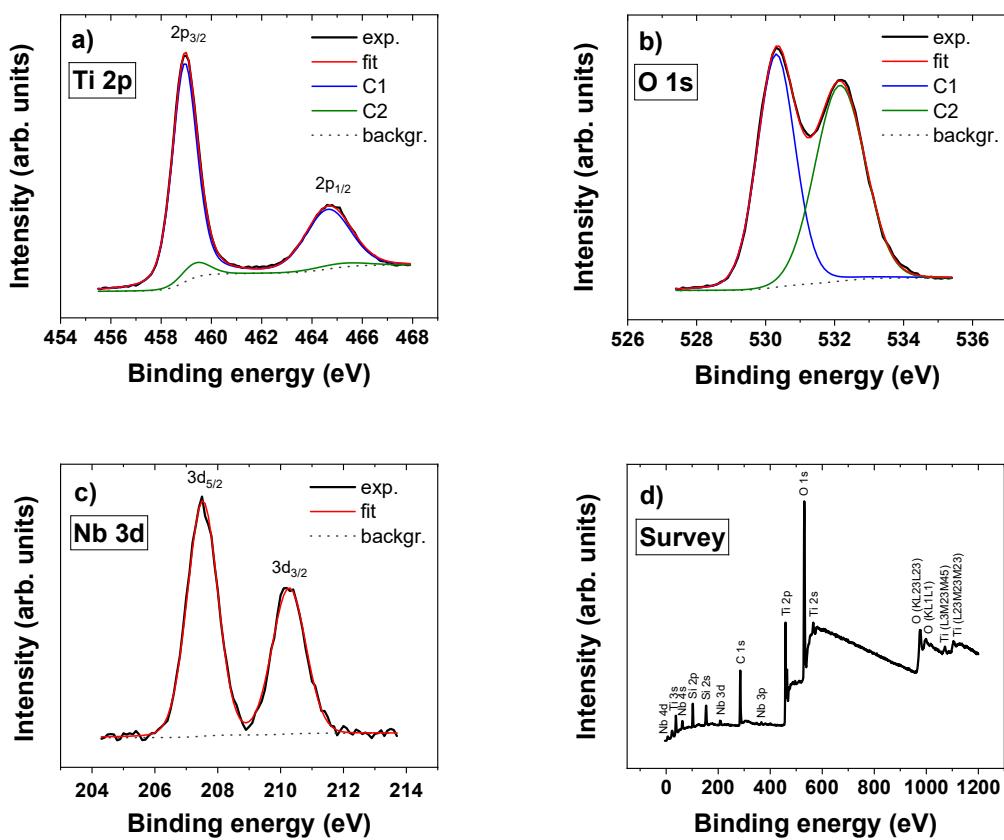

Figure 2 – XPS experimental (exp.) spectra and respective fits for the a) $\text{Ti} 2\text{p}$ (fitted with 2 components, C1 and C2), b) $\text{O} 1\text{s}$ (fitted with 2 components, C1 and C2) and c) $\text{Nb} 3\text{d}$ core levels; in these plots the background (backgr.) is also shown. d) survey spectra.
