

# Pt-Ag Composite Hollow Cathode Configuration

- Inverted Cylindrical Magnetron sputters inwards.
- Multiple stacked elemental rings of Pt and Ag on a stainless steel master ring
- The ring configuration can be changed to target composition

## **Stainless Steel Master Ring**

- 4.000" wide x 7.000" internal diameter
- Used to mount targets within hollow cathode

## **Elemental Target Rings**

- 0.250" wide x 7.000" diameter
- 15 can fit within the 4.000" height of the master ring
